The CALFED Bay-Delta Program welcomes your participation. Please use the space below for your written comments (attach additional sheets if necessary).

Comments:

I do not see how dredging & exporting more H₂O
could possibly help ecosystem restoration. Why
is it necessary to export more H₂O south, especially
when there are no controls on water restrictions such
as shower nozzles etc. down south. How are the barriers
scheduled to work? Are they capable of being opened or shut
manually? The loss that San Joaquin County will be hit
with is much more important than H₂O moving down south.
It's not our fault that there is a desert there. (over)

How could exporting more H_2O away from
us solve the current dissolved oxygen
content problem already existing in the
Stockton area.
